### DETAILS THAT MAKE THE DIFFERENCE.

The most important things are often difficult to be seen, they are hidden and become visible only when you realize that it's just a tiny difference that makes at the end the bigger difference. Outdoor flooring support has **never been so thin** - it's called **STAR.T** and it's meant to change the market. **It's the most adaptable, especially for renovations, the only one constantly adjustable thanks to the well known adjustment key**, the only one adaptable to any kind of tiles. It makes any outdoor project simple, whether you're doing it by yourself or hiring contractors, and it's guaranteed by Eterno MRP Supports

Eterno's new **Star.T** support can meet even the most demanding "thresholds." Its compact size makes it a perfect pedestal for renovation. **"Star.T" is adjustable from 3/8" - 9/16" (8 to 30 mm) and it's compatible with any type of ceramic, concrete, or composite material floor of any size and weight.**

The adjustment of **"Star.T"** to the millimeter makes it possible to realize elegant and stable floorings, speeding the installation and giving solidity and precision to the entire pavement. **"Star.B" is the only extension that fits "Star.T"**, that enables to reach "NM1" and "SEO" adjustable supports; only one height for a versatile and simple product: it is placed under the "Star.T" increasing its height by 3/16" (5mm) and with the possibility to add more "Star.B" on top of each others in case of need.
