\*Please keep with tapered package.

A user friendly vent pipe extension to be installed at any location where the plumbing vent pipe height above the existing level of the finished roof system surface does not or will not comply with applicable building code requirements.

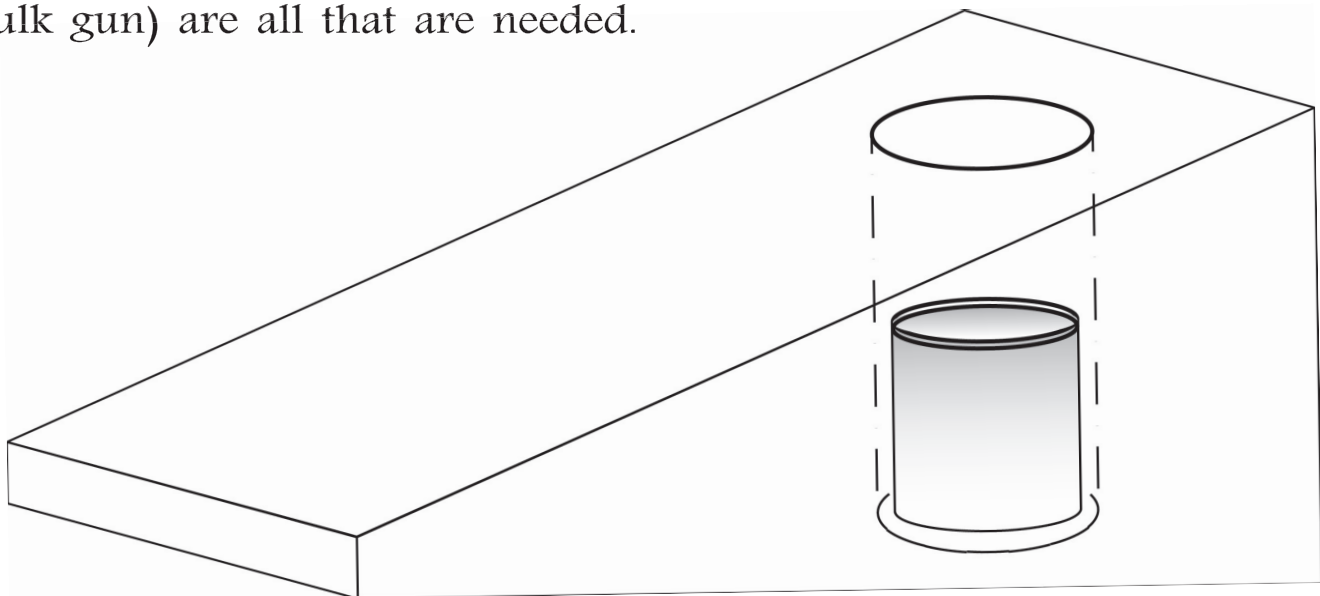

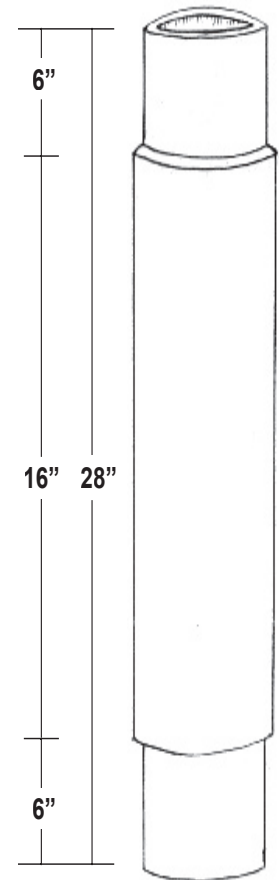

Tubos (patent pending) is the fastest, cheapest, & strongest method for extending your roof pipes.

No special tools are required to size & install Tubos securely into openings of existing vent pipes. Standard hand tools (tape measure, manual or portable battery powered saw, caulk gun) are all that are needed.

Tubos fits in 2", 3" & 4" diameter pipes & works in Cast Iron or PVC.

After one end of the Tubos is cut & installed, the opposite end can be retained for future installation at another pipe with the same diameter.

Will work on your deepest tapered or foam roofs.

Contact your local distributor of choice to purchase Tubos.
